TITLE	Enterprise Standard Industrial Classification Manual. 1974.
INSTITUTION	Executive Office of the President, Washington, D.C. Statistical Policy Div.
PUB DATE	74
NOTE	28p.; Revised edition
AVAILABLE FROM	Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 (Stock Number 4101-00091, $0.65)
EDRS PRICE	MF-$0.83 HC-$2.06 Plus Postage.
DESCRIPTORS	Administration; Agriculture; Business; *Classification; *Codification; Construction Industry; Economic Factors; Financial Services; Health Services; *Industry; Insurance Companies; Manufacturing; Public Service Occupations; Real Estate; Retailing; Service Occupations; Standards; Transportation; Utilities; Wholesaling

ABSTRACT

This classification is presented to provide a standard for use with statistics about enterprises (i.e., companies, rather than their individual establishments) by kind of economic activity. The enterprise unit consists of all establishments under common direct or indirect ownership. It is defined to include all entities, including subsidiaries, where there is more than 50% ownership. The classification covers the entire field of economic activities: agriculture, forestry, and fishing; mining; construction; manufacturing; transportation and public utilities; wholesale trade, retail trad ; finance, insurance, and real estate; services; and public administration. This classification is a revision of the 1968 Enterprise Standard Industrial Classification (ESIC). Most changes reflect the attempt to conform with the latest revision of the Standard Industrial Classification (SIC) (1972). (A table showing the changes is presented in the appendix.) The structure of the enterprise classification makes it possible to tabulate, analyze, and publish enterprise data on a division, two-digit, three-digit, or four-digit basis. Entries appear by field and contain the ESIC code number, the enterprise title, and the SIC code number. (CSS)

EXECUTIVE OFFICE OF THE PRESIDENT
OFFICE OF MANAGEMENT AND BUDGET

ENTERPRISE STANDARD INDUSTRIAL CLASSIFICATION MANUAL

1974

PREPARED BY THE STATISTICAL POLICY DIVISION

PREFACE

The ENTERPRISE Standard Industrial Classification provides a standard for promoting the comparability of statistics about the business enterprises of this nation. It is one part of a coordinated system of standards to establish comparability among statistics compiled by different agencies. This classification allows statistics classified by this standard to be related to statistics of establishments classified by the Standard Industrial Classification.

This revision of the Manual was the work of an Ad Hoc Group chaired by this Division. We wish to thank the Ad Hoc Group (listed below) for their contribution to this effort. We in the Office of Management and Budget, however, are responsible for the final decisions in this Manual.

Joseph W. Duncan
Deputy Associate Director
Statistical Policy Division

INTRODUCTION

PURPOSE OF THE CLASSIFICATION

This Classification was developed to provide a standard for use with statistics about enterprises (i.e., companies, rather than their individual establishments) by kind of economic activity. Its use will facilitate the collection, tabulation, presentation, and analysis of data relating to enterprises; and will promote uniformity and comparability in the statistical data of federal government agencies. The classification of enterprises, rather than that of their constituent establishments, is used for compiling and analyzing financial and related statistics (such as income, expenses, and profits from the income statement; debt, liquidity, and other balance sheet items; and other data that may be available only on an enterprise basis).

DEFINITION OF THE ENTERPRISE

The enterprise unit consists of all establishments under common direct or indirect ownership. It is defined to include all entities, including subsidiaries, where there is more than 50 percent ownership. It may vary in composition ranging from a single legal entity (e.g. corporation, partnership, individual proprietorship) to a complex family of legal entities under common ownership. All subsidiaries of a subsidiary which are more than 50 percent owned would also be included. The 50 percent rule is applied to each level of subsidiaries. Even though a company may be able effectively to control another company with 50 percent or less ownership, the controlled company is not to be considered part of the enterprise. In some cases, it may not be feasible or possible to follow this definition. For this reason a detailed written description of the enterprise should be included in publications presenting enterprise industry statistics, especially if it differs from this definition.

SCOPE OF THE CLASSIFICATION

The Classification covers the entire field of economic activities: agriculture, forestry, and fishing; mining; construction; manufacturing; transportation and public utilities; wholesale trade, retail trade; finance, insurance, and real estate; services; and public administration.

The structure follows closely that of the Standard Industrial Classification (SIC)* used for the classification of establishments, thus providing a means for linking establishment statistics and enterprise statistics.

* Standard Industrial Classification Manual 1972, Office of Management and Budget, Stock number 4101-0066, available at the Government Printing Office.

The four-digit SIC structure is not practical for enterprise statistics since many enterprises encompass establishments in several industries. For instance, the Motor Vehicles and Equipment industry is made up of the establishment industries for Motor Vehicles, Motor Vehicle Parts, Truck and Bus Bodies, and Truck Trailers, since they are frequently owned by the same company.

The classification covers all enterprises, regardless of ownership. Where a classification by ownership or legal form of organization is needed, the classification appearing in the Introduction of the SIC Manual should be used.

PRINCIPLES OF THE CLASSIFICATION

The following criteria were used as guidelines in evaluating the changes to the enterprise industries:

(1) The industry classification for enterprises should be essentially compatible with that for establishments. However, the industrial activity patterns of enterprise organizations may in some instances result in enterprise industries crossing major groups or divisions.

(2) The group of enterprises comprising an industry should be economically significant; that is, have 50,000 or more employees, or annual business receipts of $2 billion or more.

(3) The group of enterprises comprising an industry should be engaged to a high degree in the activity defining the industry, preferably 70 percent or more for nonmanufacturing and 60 percent or more for manufacturing.

This Classification is a revision of the 1968 Enterprise Standard Industrial Classification (ESIC). The revisions were evaluated on the basis of enterprise data from the 1967 Economic Censuses and from other sources, by applying the criteria described above. Most of the changes were made so that the ESIC would conform with the latest revision of the Standard Industrial Classification (1972). Some additional industries were created, and in a few cases small industries were combined. A table showing the changes is shown in the Appendix.

BASIS FOR ASSIGNING INDUSTRY CLASSIFICATIONS TO ENTERPRISES

An enterprise should be assigned to the industrial classification which includes the plurality contribution of its establishments. Ideally, the value added by the establishments to the goods and services should be the measure for determining the classification. In practice, value added data are not always available; in these cases it is necessary to use whatever available measure of activity could most closely approximate the same results.

STRUCTURE OF THE CLASSIFICATION

The structure of the Enterprise Classification makes it possible to tabulate, analyze, and publish enterprise data on a division, two-digit, three-digit, or four-digit basis. If possible, enterprises should be classified at the four-digit level even though the detail is not used in analysis or publication. This permits an agency to select the level of detail considered most appropriate for presentation of its data and to use additional subdivisions in adapting this Classification for its own use, while still retaining basic comparability with the classifications used by other agencies. Any regroupings or industry subdivisions should be clearly labeled.

INDUSTRY CODE NUMBERING SYSTEM OF THE CLASSIFICATION

The detailed enterprise industry code of the Classification is a four-digit number with a decimal point between the second and third digits to distinguish visually the Enterprise from the Establishment SIC numbering system. The first two digits of the code represent the Major Group, similar to that for the establishment SIC. The third and fourth digits represent the enterprise subdivision.

The codes for enterprise industries were selected to provide codes as close in content to the establishment SIC as possible, but they do not necessarily have the same definition as the establishment industry. Where the content of the classes was identical in the two systems, the SIC code was used. Where the content was different, another code was used if possible. Miscellaneous and "not elsewhere classified" industries were coded with a "9" even though the industry was not identical in content to the SIC.

DEFINITION OF ENTERPRISE CLASSES

The enterprise industries are defined by one or more SIC industries as shown in the right hand column and are not defined specifically in this manual. The content of each enterprise industry is fully defined only by reference to the corresponding industries in the 1972 SIC Manual. The titles in this manual were shortened so they could be used in publication tables (4-digit titles have been limited to 36 characters and the rest to 38 characters).

ENTERPRISE STANDARD INDUSTRIAL CLASSIFICATION (1974)

ESIC code	Title	SIC code
A	AGRICULTURE, FORESTRY, AND FISHING
